Restriction to one of the following inventions is required under 35 U.S.C. §121:

- I. Claims 1-6, drawn to a synthetic intermediate.
- II. Claims 7-10, 16, drawn to a method of preparing a phosphoramidate prodrug.
- III. Claims 11, 12, 14, 17-20, drawn to a phosphoramidate prodrug.
- IV. Claim 15, drawn to a method of preparing the compounds of Group I.

Claim 13 is not grouped. Claim 13 is drawn to a method, and is recited to be dependent on claim 12, which is drawn to a compound. Accordingly, the claim dependence is not proper. In the event that the claims are amended so that claim 13 is properly subgeneric to one of them, claim 13 will be grouped appropriately.

The claimed inventions are distinct.

Inventions {II, IV} and {III, I} are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP 806.05(f)). However, in the event that either of Groups I and III is elected, and claims therein found allowable, the corresponding "method of making" claims will be joined therewith for further examination.

Inventions I and III are related as mutually exclusive species in intermediate-final product

relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP section 806.04(b), 3rd paragraph), and the species are patentable distinct (MPEP section 806.04(h)).

In the instant case, the intermediate product is deemed to be useful as a synthetic intermediate for other compounds, and the inventions are deemed patentably distinct since there is nothing on the record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentable distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103 of the other invention.

Applicant is advised that for the response to this requirement to be complete, an election of the invention to be examined must be indicated, even if the requirement is traversed (37 C.F.R. 1.143).

Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).

.

In addition to the foregoing, applicants are required under 35 U.S.C. §121 to elect a specie for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. A "specie" is a specific compound, which is fully defined, and with all substituent variables fully accounted for. In the event that either of Groups II or IV is elected, a "specie" would be a target of the synthesis.

Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a generic claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 809.02(a).

Should applicant traverse on the ground that the species are not patentable distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. §103 of the other invention.
